Meter Fault Handling Procedure

MetroGrid Utilities — Demonstration Knowledge Base | Owner: Meter Operations | Version: 2.4 | Status: Approved for Demo

Overview

Meter faults can be reported through customer service, field operations or monitoring processes. The initial service interaction is intended to capture enough information for the appropriate team to determine whether a remote review, field inspection or replacement workflow is required. The service representative should not make a technical diagnosis beyond the checks permitted by the approved procedure.

Initial assessment

The representative should verify the customer account and service address and confirm the meter number when available. The customer should be asked to describe what they observed rather than being asked to perform electrical work. Useful descriptions include a blank display, damaged casing, unusual physical condition, suspected failure or a meter that cannot be read.

Basic checks

Where the service system provides an approved status or diagnostic check, the representative may review that information and record the result. The representative should not instruct the customer to remove covers, manipulate wiring, bypass equipment or perform any activity that creates an electrical safety risk. If the issue cannot be resolved through permitted checks, the case should proceed to the appropriate service workflow.

Determining the next workflow

A case supported by the replacement criteria should proceed toward a meter service or replacement request. Where the evidence is insufficient, the representative should capture the missing information or route the case for assessment according to the applicable workflow. A technical decision requiring physical inspection remains the responsibility of the field operations team.

Exceptions

If the customer reports a safety hazard, the normal fault-handling sequence is interrupted and the safety escalation process applies. If the reported issue is primarily a billing dispute with no separate evidence of meter malfunction, the billing investigation process should be used.
